Nautech's ANPR Policy

ANPR – Automatic Number Plate Recognition System

The Nautech ANPR System receives encrypted licence plate data from ANPR cameras around the country and compares it against a database of "Stolen Vehicles" provided by NZ Police and publicly available. Where a match occurs, Police are alerted. This will only happen when a vehicle is registered as stolen by the Police.

Personal information is limited, the system receives from the camera the vehicle licence plate, date, time, and location of the image capture, and a still image of the capture from the camera.

The system is fully automated and has no user interaction. Data is automatically deleted after a period of time.
